The screenshot displays a GIS application interface. On the left, a map shows a network of streets with a highlighted route in green. The route starts at a red dot on Barton Rd and passes through several numbered points (1, 2, 3, 4) marked with green circles and blue squares. The map includes street names like San Bernardino Ave, W Lugonia Ave, W Park Ave, and others. On the right, a control panel is overlaid on the map. It contains the following elements:

- Text: "Click on a button to add facilities, barriers, and incidents. Modify input properties to define closest facility parameters. Click the Solve button to generate results and display them in the map. Hover over route results to see incident and facility ids and travel time."
- Buttons: "Add Facilities", "Add Incidents", "Solve", "Point", "Line", "Polygon", "Clear All Graphics".
- Form fields:
 - Travel Direction: From Facility (dropdown menu)
 - Default Cutoff: 10 (text input)
 - Default Target Facility Count: 1 (text input)
 - Outout Spatial Reference: 4326 (text input)
